STORY
ABOUT US

indzzGroup
INNOVATION INTERACTIVE TECHNOLOGY

Founded in 2007, INDZZ Group is a Hong Kong-based company that specialises in IT and multimedia solutions, including UI & UX design, web development, mobile apps development and interactive digital solutions.

We are a team of creative designers and professional software engineers. With our experience to work with a few hundreds of clients, including many well-known corporations and organisations from various industries, we are confident to provide innovative concepts and reliable solutions to our valuable clients.

In recent years, INDZZ has grown up from a web and apps development house to a series of brands that covers a wider range of IT services.

We aim at providing professional and caring customer services. To create a unique solution that fits our clients' needs, our experienced consultants communicate with clients and listen to their ideas in earnest. The consultants also provide professional advice to the clients, so that they will benefit from the power and usefulness of our IT solutions.

3 CORE BUSINESSES

INDZZ.com

Began with Web & Apps

INDZZ.com is our first core business founded in 2007. We are specialised in UI & UX design, web programming and apps development.

Every pixel on your screen is amazing. Comprising a team of talented designers and programmers, INDZZ helps you develop a fascinating and

impressive website and mobile app that every detail looks perfect. We believe that the Internet is an effective way to promote your businesses, services and products. The experienced and knowledgeable INDZZ team provides integrated solutions from planning, design, programming to deployment.

Interactive Digital Solutions

Our creativity should not be limited to a web browser or a mobile phone. INDZZ Interactive is a brand that focuses on interactive digital solution services.

With our team's technology background and innovative mind, we can provide professional interactive digital solutions, including concept development, design, programming and hardware installation.

INDZZ Interactive has worked for many shopping malls and NGOs. We are good at creating Kinect motion tracking experience, VR and AR solutions.

If you are looking for something different for your promotional activities, talk to us for a vivid and impressive interactive solution to attract your potential clients.

INNOVATE for the future

A new investor joined us. Started our business in China.

IT Human Resources Outsourcing Service

Located in Shenzhen, INDZZ.cn was our new step in Mainland China in 2016.

We understand that hiring and training IT operators could be a big headache for enterprises. INDZZ.cn aims to provide software talents outsourcing service. With our expertise in IT, it is a well-fit for clients who need long-term IT services in China, such as API

Integration, WeChat official account management, system maintenance and technical support.

By choosing our IT outsourcing service, you can save time and cost of recruitment and training and focus on your core business without worries.

We are glad to work with our valuable clients in different scales across various industries

- New Media Branding Design
- System Maintenance
- Webmaster Service
- CRM
- Email / SMS Notification
- API Integration
- Data Import / Export
- Data Migration
- Payment Gateway Integration
- Social Media Connection
- Digital Marketing
- Search and Comparison

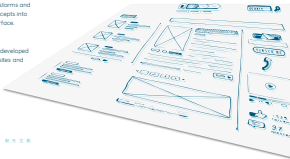

5 STEPS PROCESS

DISCUSS / DESIGN / DEVELOP DEMONSTRATE / DEPLOY

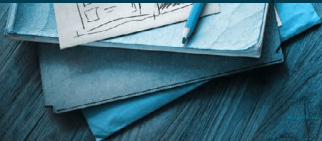

Proven by over hundreds of projects in the past ten years, we have a "5S" process to work smoothly and effectively.

- Discuss**
In the beginning of every project, we discuss with our clients to understand and define their needs.
- Design**
Our creative team brainstorms and then transforms our concepts into wireframe and user interface.
- Develop**
Our software engineers developed stable and secured websites and apps based on designs.
- Demonstrate**
After software development, we demonstrate the product to the client and fine-tune the product.
- Deploy**
We launch the website or app, meaning that the product is ready to use finally.

SUCCESSFUL CASE STUDIES

— The best evidence to prove our capability and creativity.

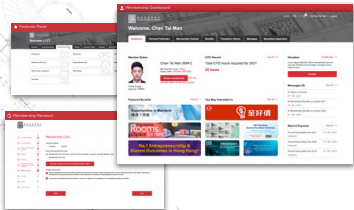

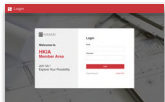

香港建築師學會
The Hong Kong Institute of Architects

Membership System & Renewal Reminder System Content Management System

Upon invitation by The Hong Kong Institute of Architects (HKIA), a professional body for architects in Hong Kong with approximately 1500 full members, we developed a member management program to handle member information and all events of HKIA for both external and internal use.

The system is designed for both the operation admin and the member of HKIA. The staff can handle account applications and reinstatement, update and export raw data, send reminders within the timeline, and upgrade membership status with the Content Management System. Members can also find all information about their membership on the platform immediately.

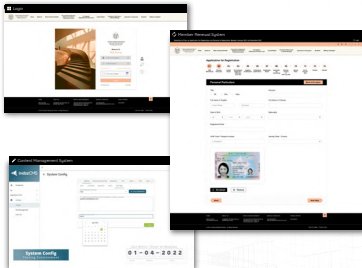

Architects Registration Board
Hong Kong Special Administrative Region
建築師註冊管理局
香港特別行政區

Membership Renewal Reminder System

The Architects Registration Ordinance is an ordinance to provide for the registration of architects. We developed a management program for the renewal of registration to alert important events for the Architects Registration Board.

The system can computerized the corresponding action and the Key dates of each registered architect can be identified. Admin may trigger actions based on different key dates of the batch groups.

Internal Training 3D Platform

With the changes in physical classes to online due to Covid 19, interactions between teachers and students have become less and less. VTC invited us to develop a 3D Design Thinking World platform to nourish students' co-creation, provide interactivity, and handle teaching operations and processes such as submissions of assignments.

Teacher assigns certificates to each student to login the platform. The Design Thinking World is formed with five aspects of Design Thinking: Enable, Engage, Emission, Experience and Evaluate. Animation teaching videos are also provided as teaching materials.

Students are able to create their avatar and control it to explore the World: enter different Design Thinking zones, change their avatar costume, etc. Enhance the students' learning experience.

Online Storage Management System

Beebox is a storage service platform in Hong Kong. The company aims to soothe the insufficient storage space for the locals and provide them with a rapid and convenient storage rental service.

The Online Storage Management System is used for digitizing the operation all around, including storage box inbound and outbound procedures, driver delivery management, and assigning, searching, and shelving storage boxes. Staff and drivers are able to handle them all through the system.

Whether they are newcomers or existing members, customers may book service through the online system. The website and system make the procedure of the storage box's delivery and retrieval much easier to handle.

PROJECT 1

KE User App

KE User App by Kerry Express (Hong Kong) provides professional and comprehensive services for clients who choose Kerry Express as their delivery partner. Through this app, clients can track their order status and its details, sign for their parcels or packages and more.

KE User App also connects all the brands under Kerry Express, such as KE Consol and KLCLUB. Within just one app, customers and client can review their membership-inclusive privileges and enjoy the modern paperless delivery experience.

PROJECT 2

KE website

To fulfill the different brands of Kerry Express (KE) needs, We provide tailor-made informative website designs for KE's internal and external use.

For the KE website, the client requests a guideline for customers and internal staff on how to handle electronic waybills with the Kerry Express Order Management System (KE OMS) platform. Therefore, we designed tutorials and a User Manual for the platform to provide a better preview of the procedure, including the process of login, upload orders, print order AWB labels, pick-up requests, etc.

We also help with K-Parcel's website, which displays K-Parcel as a Joint Venture between Kerry eCommerce (KEC), Sociedad Estatal de Correos y Telégrafos, S.A. ("Correos"), and Global Freight System Forwarding Limited (GFS) and other business information.

KE 集運

PROJECT 3

KE Consol

KE Consol provides efficient operations and cost-saving options through co-loading various goods to share a ride for freight. Users can enjoy the efficient delivery services and the convenience of online shopping.

Customers can combine goods into a single shipment, handle order payments, arrange and track shipments anytime. Through the app, they can contact customer services, rate the service's performance, and review their K-coin amount.

萬寧 manning's

Redemption & Order Management System (OMS)

PROJECT 1

Order Management System (OMS)

Manning's is one of the popular places in Hong Kong where Mainland China tourists will come over to purchase massive amounts of goods. In this project, we aim to enhance the shopping experience of the tourists by providing a better Hong Kong local pick-up service. Upon invitation, we developed a bundle of Redemption and Order Management System (OMS) for Manning's.

Once the Mainland China customers placed orders on the Manning Online eShop, the order will immediately be sent to our tailor-made Order Management System. Based on the pick-up point selected by the customers, the system will quickly assign a local manning shop to handle the product pick-up action for the order.

萬寧 旅客預購專區

萬寧 manning's

PROJECT 2

Redemption App

When the Mainland customers arrive at the specific Manning retail store, the retail staff is able to check the order on the Manning Redemption App and process the order redemption action. Therefore, the Mainland customers can get their goods with the soonest experience. They do not need to search for their desired products within the store and wait for a long queue of payment lines.

dyson

Internal Quotation Record & Repair Status System

By lightweighting and making the repair process of Dyson easier, we designed an Internal Quotation Record and Repair Status System to manage Dyson's repair orders and status.

The system handles the full process of Dyson's repair service, starting from creating repair quotations for customers, to following up and managing the customers' repair cases. The administrator can review logs, customers' comments and responses, and payment status of each repair order.

After delivering the Dyson products to the repair center, customers can review the maintenance progress through our platform online, such as requesting repair inquiries, settling repair payments online, and viewing repair order status. The repair process became clear and transparent after using the system.

Columbia

via Shipment

Client Management and Quotation System

Columbia International Removals is a cross-border logistics company, that specializes in international door-to-door, door-to-port services. We help to provide solutions for pain points of processing numerous paperwork and managing the orders all through offline manual handling.

By using the system, Columbia is now able to provide efficient and accurate operation with their orders. The CMS system digitizes their operation procedure and they are now able to import all the price system, surcharge, terms, and conditions to the system with just one click.

They may now review the daily arrangement of working orders and appointments, manage, assign, and combine jobs, evaluate workers' performance, and export quotations and reports as well.

PROJECT 1

Kowloon City Municipal Services Building

A Mobile Apps (iOS/Android)

EMSD maintains E&M equipment of the building. To facilitate a more efficient way to access equipment information and report progress for maintenance task, the department sought to develop mobile apps.

Users may scan QRcode sticked on equipment to access its details or submit reports. 3D models of equipment can also be viewed. Tasks assigned to users would be reminded via push notifications.

B Web Portal

The Web Portal is designed for the department's staff in the back office to check submitted reports, create events and manage the system. Same as the mobile apps, users can browse the 3D reality view of equipment in the system. They may also check related events of locations and equipment from the event calendar.

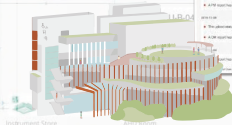

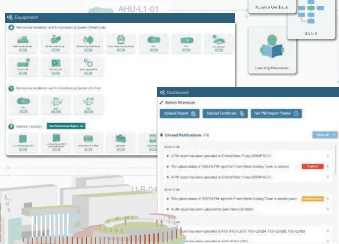

PROJECT 2

Ko Shan Theatre New Wing Web Portal

EMSD provides engineering services to Ko Shan Theatre. In the past, the department stored operation manuals of equipment in a harddisk only. Due to the vast amount of files, it was time-consuming to find a desired information. The department sought a document management solution.

After understanding the background, our designers proposed an intuitive and well-organised graphical interface. In addition, we advised to host the system on cloud platform for flexibility of storage space needs.

MING PLATE

名牌車牌

Website & Online Car License Plate DIY Platform

MingPlate is an online car license plate DIY platform. Customers can choose and preview their favorite font, pattern, and brand logo, even in both 2D and 3D presentations. Step by step, customer can create their ideal car license plate.

We also provide a time-saving solution for the client by providing PDF generation based on the customer's ideal car license plate on a 1:1 real scale. Therefore, the client can manufacture the license plate directly from the generated document.

Online Shop with Product DIY Feature

Alcani is a fashion brand which aims to sell its products globally through an online shop developed by us. Not only can its customers order a pre-made product, but it also includes a DIY function to customise a product.

PROJECT 2

Swim for Millions Event Site

We developed a campaign site and online registration system for the Chest's annual fundraising event "Swim for Millions". After the event, participants may check results and download auto-generated certificates in PDF format from the website.

① <https://www.cmmchest.org.hk>

PROJECT 3

New Banknote Campaign Site

The Chest sought to develop a website for its charity sale of new banknotes in 2018. Apart from the introduction of the campaign, the public could apply for different packages of new banknotes and pay by credit card online through the website.

多謝你，香港人！

公益金於1968年成立至今50年，從第一年籌得港幣600萬元，到今天累積善款高達港幣60億元，所收的捐款都用在香港人的身上，100% giving，不附帶任何行政成本。

香港醫學博物館

Online Event Registration System

HKMMS is a museum which is related to health and medical history. The museum organises activities, such as seminar and exhibition. We developed an online event registration system for the museum, so that the public can register for an event and settle the registration fee online.

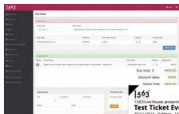

1563'
at The East

Website & Online Ticketing System

Main Website with Ticket Purchase

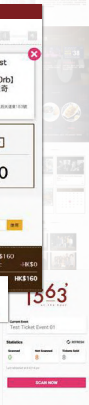

1563 at the East is a restaurant and music live house located in Hopewell Centre. We developed its website with an online ticketing system when it established in 2016. Customers can buy tickets of events organised in 1563 and enter with e-tickets generated by the system.

<https://www.1563.com.hk>

Check-in App for Staff

Apart from the website, we developed an Android app for the staff to scan the QR Code on e-tickets presented by the event audience. An instant report with check-in status could be generated in the CMS.

Website with Product Search & Comparison

GenieD is a brand new online platform that provides mortgage information comparison. We were given a chance to design its brand name, logo, website and promotional video in a young and professional image.

In the website, there is a "P-L oan Search Engine". After we studied the industry, our designers thought that numbers are the key elements that visitors concern most. Finally, we designed a user interface that emphasises numbers and allows visitors to compare different plans in a clear way.

Lee Kum Kee Global Sustainability Report 2017

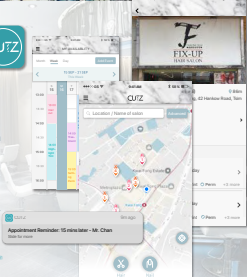

CUTZ

B2C Matching Apps

CUTZ is a matching app for the public to find a hair salon. There are two interfaces in the app - Customer Portal and Stylist Portal.

The former one allows customers to find and book a hair stylist under the entered conditions, while the latter one allows hair stylists to check and manage their appointments in a clear monthly, weekly or daily schedule view.

showtime

MOBILE APPS (IOS/Android)

Movie Information Mobile Apps

Operated by the Hong Kong Theatres Association, ShowTime is an informative movie apps with cinema locator, movie show time and seating plan details. We were asked to integrate API provided by different cinemas, in order to offer complete and all-rounded information.

Technically, the apps were developed with Flutter mobile framework. It enables a fast development cycle and ensures a unified experience across iOS and Android platforms.

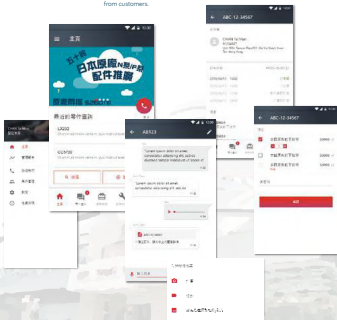

"PARTS+" Car Parts Mobile Apps

PARTS+ is a mobile app owned by Dah Chang Hong for its garage customers to enquire about parts information. The major feature of the app is a WhatsApp-like instant messaging function, which supports group chat, photos, videos and audio recordings. There is also an online shop to order car parts and redeem gift.

We also developed a staff version "PARTS+ DEPOT" for the company's staff members to respond to enquiries from customers.

"Citygate Outlets x WeChat" VR Game Development

A virtual reality game was developed for Citygate Outlets to promote the use of WeChat Pay in the mall. As if taking a hot air balloon, players can enjoy a virtual tour to sightsee around attractions, such as Tai O, Ngong Ping 360 and the Big Buddha in Lantau Island. We provided an all-rounded solution from 3D modelling, scene design, game programming to equipment rental.
